

MILKIWEAN ACTIBAR

Sometimes, performance just needs a little push

Milkiwean ActiBar is the first piglet training bar that activates pre-weaning feed intake.

By tapping into piglets' natural behaviour, it helps them start eating solid feed earlier and be better prepared for weaning, setting the foundation for long-term performance.

**Ready to give performance the right push?

representative today and discover how Milkiwean
ActiBar fits into your feeding programme.**

MILKIWEAN ACTIBAR ACTIVATES NATURAL BEHAVIOUR WHEN IT MATTERS MOST: BEFORE WEANING

Piglets naturally explore and develop chewing behaviors, which are linked to learning to eat. Exposure to solid feed helps their digestive system adapt before weaning, supporting gut development and easing the transition after separation from the sow.

Milkiwean ActiBar support piglets through a natural process

Encourages natural behaviour

Activates early eating

Supports gut development

Sets piglets up for smoother weaning

Promotes lifelong performance

Trials carried out under European farming conditions confirm the effect of early feed intake activation.

UP TO 53%
higher pre-weaning feed intake vs. creep feed alone.

UP TO 50%
reduction in watery diarrhoea cases may be observed during the first week following weaning.

UP TO 70%
of a pig's final weight is determined by its body weight at 6 weeks of age.

Designed for practical use

Milkiwean ActiBar fits easily into existing farrowing house routines.

- No additional equipment required
- No preparation or mixing
- No mess in the pen
- Bars can be replaced easily once consumed
- No need to adapt your existing feeding programme
- Simply place the bar alongside creep feed
